Below are the major issues which we faced while building this application :-

1. **Spring boot version compatibility with gradle version**
   Issue :- Spring boot app was not getting built using the lower gradle version
   Resolution :- Refer to build config for the spring boot and gradle versions used.

2. **PostgreSql compatibility issue with spring boot**
   Issue :- PostgreSql connection was not working with spring boot for previous PostGreSql version
   Resolution :- Refer to PostGreSql client version in build config

3. **Docker build image and containerization issues**
   Issue :- We were not able to bake the image with the preconfigure jdk environment
   Resolution :- Refer to the Dockerfile to avoid issues in future

4. **Heroku deployment issues**
   Resolution :- Refer to the ProcFile
   and below find here the Heroku Documentation for spring boot application deployment
